1)Extract the file(app2.zip)

2)open the folder in vs code

3)Open android emulator (I used pie version of android)

4)open "main.dart" file

5)open the terminal

5)Run "flutter run" Command

6)Then it will open the main page give below

//This is the first page of the application

7)press the button at the rigth bottom to generate names

8)By Tapping any of the list item it will redirect or navigate to next screen to get the entire details of person

//Details page

9)The back button allows to return to the previous screen

Exp: In my Flutter application, I implemented navigation using the Navigator widget. Along with navigation, I pass parameters to the next page, sharing details retrieved from an API
